Introduction

*The objective of this project is to implement a structured, automated, and audit-ready **Loan Origination System (LOS)** workflow. The system must seamlessly connect the Loan Applicant, Loan Officer, and Credit Approval Team to reduce the Loan Application Turnaround Time (TAT), minimize manual data entry errors, and enforce strict compliance with credit risk policies.*

Problem/Impact/Successful Outcome

The Problem	The Impact	The Successful Outcome
<i>Elevated Turnaround Time (TAT): Fragmented handoffs create communication bottlenecks, extending the total loan cycle</i>	<i>Revenue Loss: High applicant abandonment rates</i>	<i>Drastic TAT Reduction, Operational Efficiency</i>

Objectives

ID	Business Objective	Business Owner	Business Importance
O01	Automated Work Assignment	Head of Retail Lending Operations	High - Eliminates manual sorting, bottlenecks
O02	Instant Credit Assessment	Chief Credit Risk Officer	Critical - Prevents customer abandonment
O03	Early Risk Detection	Chief Credit Risk Officer	Critical - Ensures real-time identification of policy violations, invalid documentation, and high-risk applications before underwriting.

O04	Transparent Progress Tracking	Business Project Manager	Medium - Provides visible queues on dashboards for both loan officers and customers, reducing incoming status inquiries.
-----	-------------------------------	--------------------------	---

Purpose Of Document

The Business Requirements Specification details the business requirements as elicited by the business analyst from the key stakeholders. The document presents the requirements in a structured way that facilitates review and sign off by the designated approvers.

Building on the high-level scope of the project as defined in the Project Definition Document, the business requirements clearly state in business language what any chosen solution must do.

This document captures the business requirements in a structured way, providing the basis for ensuring that the solution delivered meets the requirements.

It should: -

- Facilitate a shared understanding for all stakeholders of the business requirements
- Be the key input for the preparation of a functional requirements specification
- Facilitate the identification of possible solutions

Scope

In Scope	Out Of Scope
The Customer Application Portal	Monthly Billing & Collections
The Automated Check Engine	Old Loan History Cleanup
The Bank Staff Dashboard	
Security & History Tracking	

Definitions, Acronyms and Abbreviations

Abbreviation/Acronym	Description
TAT	<i>Turnaround Time</i>

Assumptions

Ref	Assumption	Detailed BRS Reference
A01	Ready-to-Use Core Systems	We assume the bank's existing backend systems (where customer accounts are held) are stable.
A02	Quick Decisions from Leadership	We assume that business leaders and risk teams will review, give feedback, and sign off on requirements as early as possible.
A03	Clean Digital Documents	We assume that customers will upload legible documents

As Is Process

- 1.Manual Application & Document Drop-off
- 2.Manual Sorting & Data Re-Keying:
- 3.Manual Credit Checks & Calculation:
- 4.Emailing the Loan Package:
- 5.Underwriting Review & Manual Notification

Detailed Business/IT Requirements

Functional Requirements

ID	Title	Requirements Description	Type (*)	MoSCoW Priority	Originator	Status (**)	Delivered By	Test ID
FR01	Applicant Portal Submission	The system must allow the Loan Applicant to securely upload scanned PDF/JPEG copies of identity proof, income statements, and tax returns.	Application	Must Have	Project IT manager	Proposed		T_FR_01
FR02	Automated Field Validation	The system must validate that all mandatory fields (e.g., SSN/National ID, Income, Loan Amount) are filled before allowing submission.	System	Should Have	Project IT manager	Proposed		T_FR_02
FR03	Loan Officer Dashboard	The system must provide a unified queue dashboard for the Loan Officer to view assigned applications, track status, and flag missing documentation.	Business	Must Have	Project Business Manager	Proposed		T_FR_03
FR04	Communication Engine	The system must trigger automated email and SMS status updates to the Loan Applicant upon approval, rejection, or request for further information.	System	Must Have	Project IT manager	Proposed		T_FR_04
FR05	Digital Signature Integration	The system must integrate with an e-signature vendor (e.g., DocuSign) to allow the Loan Applicant to sign the final loan agreement online.	Application	Should Have	Project IT manager	Proposed		T_FR_05

Non-Functional Requirements

ID	Title	Requirements Description	Type (*)	MoSCoW Priority	Originator	Status (**)	Delivered By	Test ID
NFR_01	Response Time	Page load times for the Loan Officer and Credit Approval dashboards must not exceed 2.0 seconds under normal peak loads	Performance	Should Have		Proposed		T_NFR_01
NFR_02	Data Recovery	The Recovery Point Objective (RPO) must be less than 1 hour	Reliability	Should Have		Proposed		T_NFR_02
NFR_03	Data Encryption	The system must encrypt all Personally Identifiable Information	Security	Must Have		Proposed		T_NFR_03
NFR_04	Access Control	The system must enforce Role-Based Access Control	Security	Must Have		Proposed		T_NFR_04

RACI MATRIX

Loan Origination System (LOS) Project -This RACI matrix defines the roles and responsibilities for the key functional requirements of the Loan Origination System (LOS) project, ensuring clear accountability across the business and IT delivery teams.

Functional Activity / Requirement	Jane Doe (Business PM)	Sarah Jenkins (IT PM)	Anjali Sinha (BA)	Operations Team / PO	Risk Management (CCRO)	Technical Lead / Architect
FR01: Applicant Portal Submission (Secure document upload framework)	C	A	R	C	I	R
FR02: Automated Field Validation (Mandatory fields & error checks)	I	A	R	C	I	R
FR03: Loan Officer Dashboard	C	A	R	R	I	R
FR04: Communication Engine (Automated status updates via Email/SMS)	I	A	R	C	I	R
FR05: Digital Signature Integration	C	A	R	C	R	R

RACI Definitions Legend

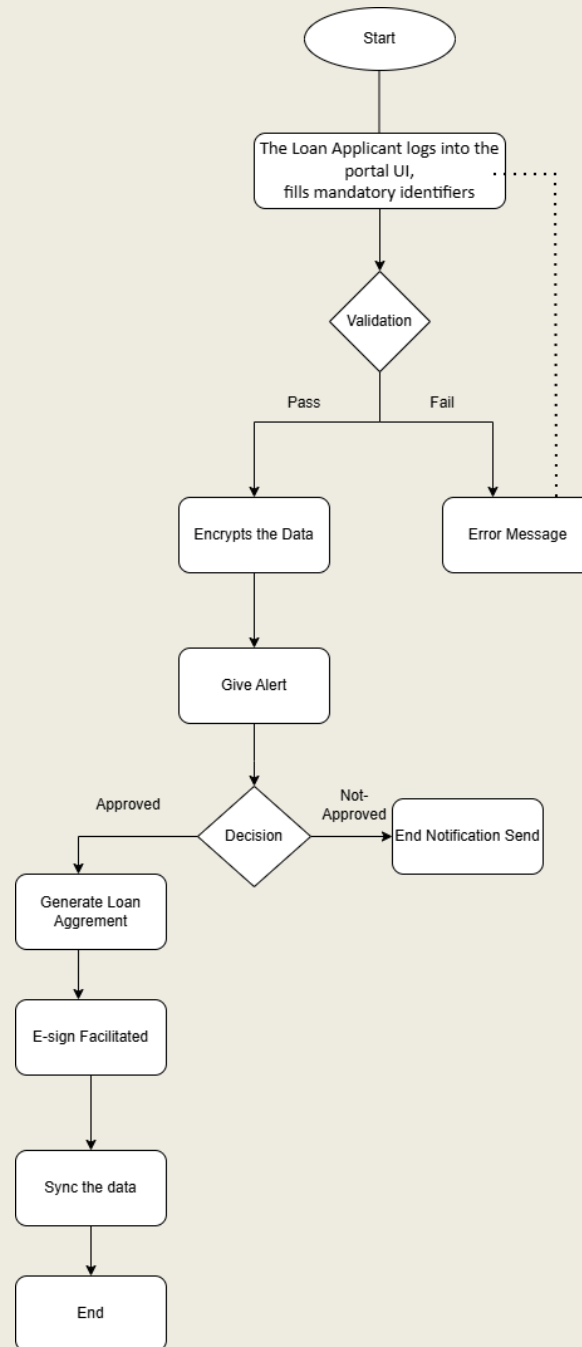

- **R - Responsible:** The person who actually performs the activity or does the work to complete the task.
- **A - Accountable:** The person with final approval authority and veto power. Only one 'A' can be assigned per activity.
- **C - Consulted:** Subject Matter Experts (SMEs) whose input or feedback is sought before or during the activity.
- **I - Informed:** Stakeholders who are kept up-to-date on progress or outcomes after the activity is completed.

Use Case: Applicant Portal Submission

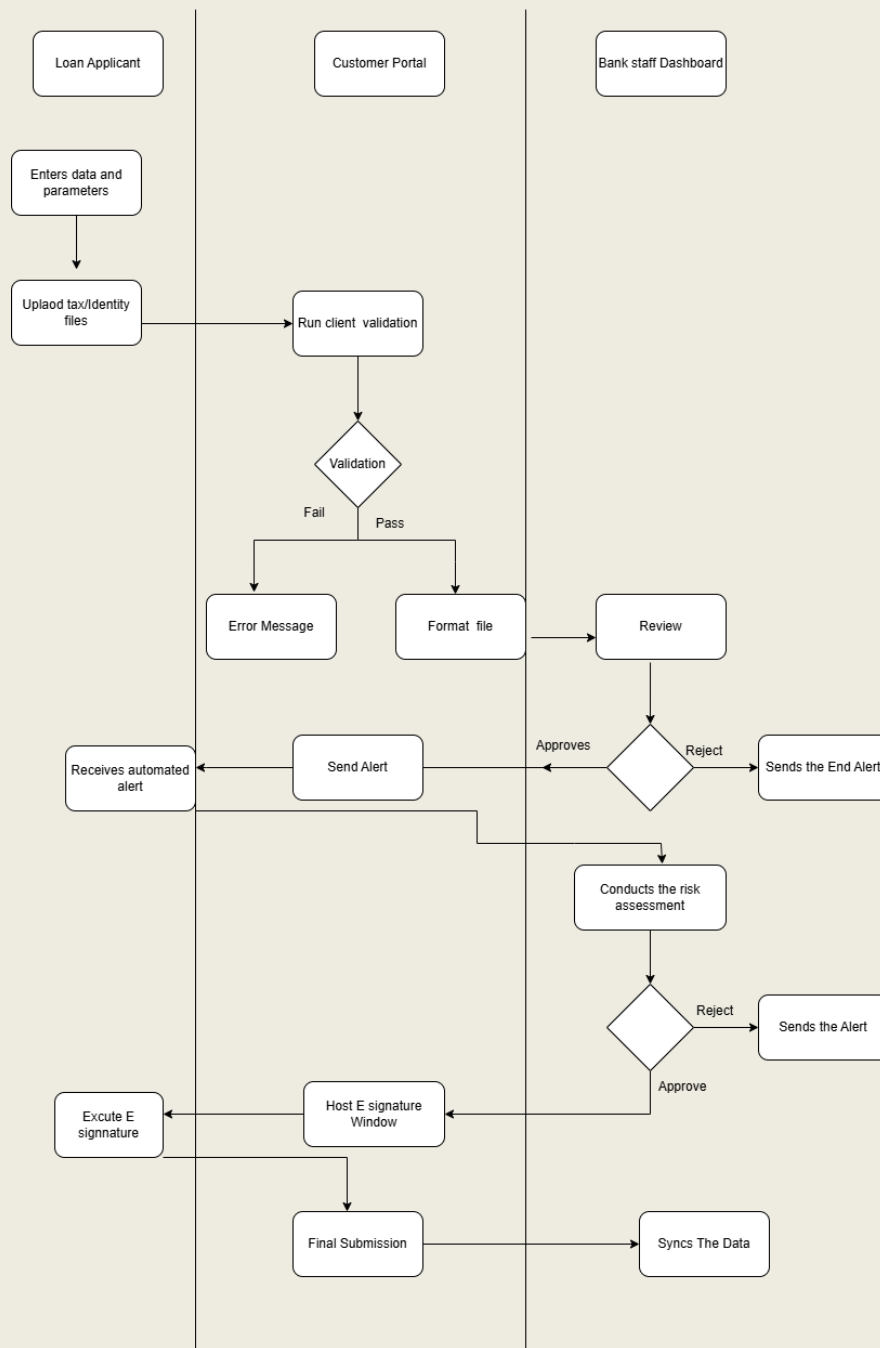

Use Case Element	Description
Use Case Name	Applicant Portal Submission
Use Case ID	UC-FR-01
Actor(s)	Loan Applicant
Brief Description	The Loan Applicant securely uploads scanned copies of identity proof, income statements, and tax returns via the Customer Application Portal to submit a loan application.
Preconditions	1. The Loan Applicant has accessed the Customer Application Portal. 2. The bank's core backend systems are stable and accessible.
Postconditions	Success: Documents are securely uploaded, fields are validated, and the loan application is successfully routed to the Loan Officer's dashboard. Failure: The application is blocked from submission, retaining the applicant on the upload screen with clear error validation messages.
Trigger	The Loan Applicant clicks the "Submit Application" button on the portal upload page.

Use Case Element	Description
Main Flow (Basic Flow)	1. The Loan Applicant fills out all mandatory data fields (e.g., SSN/National ID, Income, Loan Amount). 2. The user selects and uploads scanned copies of identity proof, income statements, and tax returns (PDF/JPEG formats). 3. The user clicks "Submit Application". 4. The Automated Check Engine validates that all mandatory inputs are filled. 5. The system encrypts the uploaded files and routes the submission to the unified Loan Officer dashboard queue. 6. The system triggers an automated email and SMS status update confirming receipt to the applicant.
Alternate Flow	A1 – Missing Mandatory Information: 1. The Automated Check Engine detects that one or more required fields (e.g., SSN or Income) are empty. 2. The system flags the missing data inline and halts the submission process until corrected.
Exceptions	1. Unsupported File Format / Corrupt File: The system detects an invalid extension or illegible file format → Displays error message: "Please upload legible documents in PDF or JPEG format only."

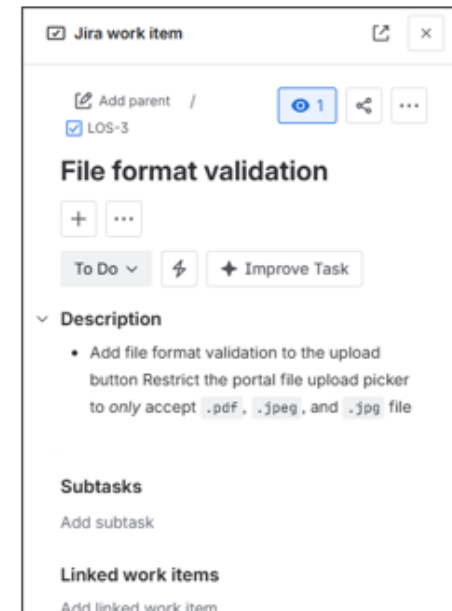

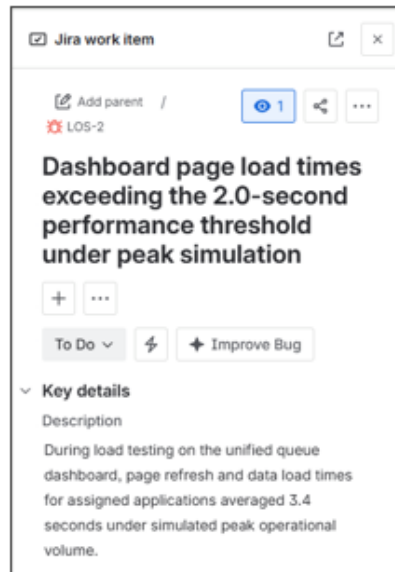

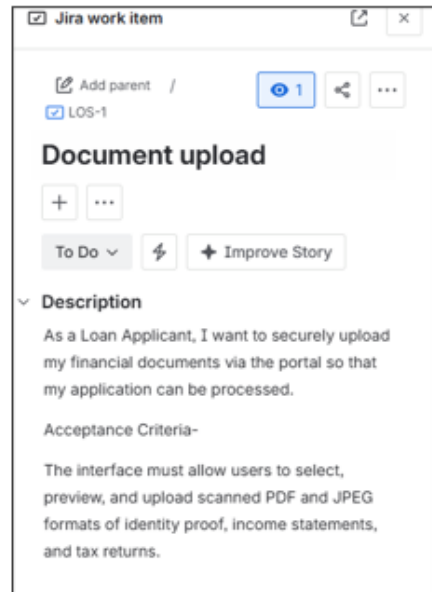

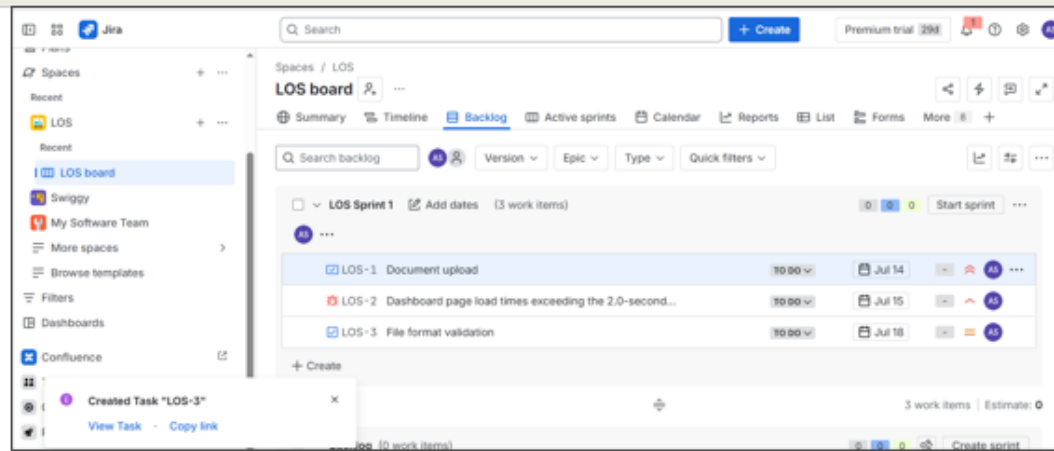

Use Case Element	Description
	2. Network/Portal Performance Timeout: Web page load or file upload takes greater than 2.0 seconds under heavy traffic \$\rightarrow\$ Displays message: "System is experiencing peak loads. Please try again shortly."
Business Rules	1. All submitted documentation must contain mandatory identification and financial fields before submission is finalized. 2. All uploaded Personally Identifiable Information (PII) must be subject to immediate data encryption upon receipt.
Frequency of Use	High – Regular transactional activity by applicants during portal operating hours.
Assumptions	1. Customers will upload legible, clean digital documents. 2. The core banking environment remains highly available to receive incoming database data.
Constraints	1. Must enforce strict Role-Based Access Control so only authorized internal staff can view the files once routed. 2. Must meet standard encryption policies for data handling.
